

HIST 2693

Forensic Archaeology

Crash sites, clandestine burials,
mass graves and human rights.

Students will be introduced to the archaeological methods and theories used to assist in the investigation of forensics and the recovery of human remains. MIA cases will be examined from past conflicts in order to provide students with an opportunity to gain *hands-on* experience with the process of determining when and how a case moves from desk-based work and into the field. International humanitarian forensics and international crimes will also be discussed.
